

PureFoamPolish

Biogenic foam polish

PureFoamPolish is a foaming polish based on biogenic raw materials and a micro-emulsion for automatic vehicle care. Thanks to the optimum foaming effect, the wash customer experiences a visible care experience. Sustainable, hydrophobic reactive and care components give the paintwork a brilliant deep shine and provide long-lasting protection against aggressive environmental influences for all paintwork, rubber and plastic surfaces. The perfect surface finish and the spontaneously collapsing foam optimally prepare the drying process. The surfactants contained support the self-cleaning of the washing materials. Also ideal for biological process water treatment plants, where PureFoamPolish is characterized by extremely improved biodegradability. VDA-compliant class A.
